

**KIT FOR ADDING A DECORATIVE, NON-SKID SURFACE TO AN
EXISTING SURFACE AND METHOD FOR USING THE KIT**

ABSTRACT OF THE INVENTION

A kit for applying a non-skid surface to a target surface and method for using the kit.

The target surface is prepared to accept an adhesive. A mask material allows selected portions of the target surface to be selectively exposed. An adhesive is applied to the exposed portions of the target surface. A first color of aggregate material is applied to the adhesive. Additional portions of the target surface are exposed and adhesive is applied. A second color of aggregate material is applied to the additional exposed portions of the target surface. The process is repeated until all desired portions of the target surface are coated with the aggregate material in the desired design. The design may be a preformed stencil in the masking material or may be drawn in the masking material and selectively removed from the masking material to apply the adhesive and aggregate material.
